

SERVICE BULLETIN #5179

SUBJECT: 400II and 700II Universal LED Display PC Boards

Starting with model 400II serial number 29000 and model 700II serial number 10000 we began using universal LED display circuit boards. The changes are: 1) R304 is now 15K on both models, 2) the 700II -20dB display range switch resistors (R137) are now 120K ohm, 3) the blue trim pot has been changed such that the wiper now goes to R305, and 4) Q301 is now a GES 97. On both models the Channel B PC board contains the power supply for the displays as before.

Earlier displays had either a blue trim pot, a red trim pot, or no trim pot at all; these boards are not compatible with the latest board design in terms of equal tracking.

We do have the earlier type displays in stock. You must specify model, serial number, and which type of display circuit board you require when ordering.

Early 400II Channel A Display	Part No.	210-0159-0
" " " B "	" "	210-0158-0
Early 700II Channel A Display	Part No.	210-0154-0
" " " B "	" "	210-0153-0
Universal Channel A Display	Part No.	210-0159-0
" " B "	" "	210-0158-0

If you have any questions feel free to contact the factory service department at the above address or phone number.
